▼ Timeline

	☰ Milestone	☰ Target Date	☰ Status
1	Design prototype	Jun 30, 2026	Completed
2	User testing	Jun 30, 2026	Completed
3	Requirements documentation	Jul 31, 2026	In Progress
4	Client and internal stakeholder reviews	Sep 30, 2026	Planned
5	Implement base site in UAT	Dec 31, 2025	Planned
6	Site migration	Q1 2027	Planned
7	Production launch	Q1 2027	Planned
8	Post-implementation analytics review	3 months post-launch	Planned

▼ List of updates

NYL to provide deck with all template enhancements

	☰ Update	☰ Notes	☰ Mockup
	Theme colors	Options for primary color • NYL blue • Dark blue • Teal AMA to send specific blue for theme	

2	ADD separate coverage category	All coverage categories: • LI • AD • DI • OO • SH	

3	Estimated cost breakdown	Summary with breakdown and total of all selected products Show breakdown for each product within product boxes	
---	--------------------------	---	--

	QuickDecision messaging	QuickDecision messaging on homepage, coverage page, and in help sections	
--	----------------------------	--	--

	Membership page introduction	Replaces current eligibility page with clear, short intro page collecting name/email/phone • User testing finding about wanting time estimate in beginning (reluctant to tell users up front about this; intro text mentions taking a "minute to get started")	
--	-------------------------------------	---	--

▼ User testing

Results

Overall, the application flow tested well from a usability standpoint. Participants were generally able to complete the task successfully, confidence was high, and several users described the experience as clear, straightforward, and easy to move through.

▼ Positive Findings

1. The step-by-step structure worked well.

Participants responded positively to the guided application flow. They liked being able to see where they were in the process, and the stepper made the experience feel more organized and achievable.

2. Users generally found the application easy to complete.

The overall flow appeared understandable, and participants were able to move through the process without major navigation issues. This suggests the core structure is usable and should be preserved.

3. The visual progress cues helped users feel oriented.

Seeing steps populate or progress forward gave users a sense of accomplishment and helped reinforce that they were moving through a defined process.

4. The application felt clear and straightforward overall.

Participants generally understood what was being asked and how to continue. The design did not appear to create major blockers in the standard flow.

5. Users expected some level of detail for an insurance application.

While sensitive or health-related questions created some hesitation, users generally understood that insurance applications require personal and medical information. This means the content itself is not necessarily unexpected, but the experience around it needs stronger support.

▼ Negative Findings / Pain Points

1. Sensitive information fields created hesitation.

SSN, driver's license, weight, and health-related fields made some users uncomfortable, especially in a prototype or testing context. One participant specifically noted that SSN could create hesitation in a real-life scenario if asked without more confirmation.

Potential design update: add trust-building microcopy near sensitive fields explaining why the information is needed, how it is protected, and whether it is required at that point in the application.

2. The health questions felt long and emotionally heavy for at least one user.

One participant said the number and nature of medical-history questions made them want to abandon the application, especially when they felt they needed to explain a sensitive diagnosis. Others accepted the questions as expected for life insurance, but the health section is still a potential drop-off point.

Potential design update: chunk the health questionnaire more clearly, add section-level progress, use empathetic explanatory copy, and make it clear why follow-up details are needed.

3. Users would benefit from time expectations at the start.

One participant suggested showing approximately how long the application will take. This is especially relevant because users may want to know whether they have enough time to complete the application before starting.

Potential design update: add brief upfront copy such as "This application usually takes about 10–15 minutes. You can review your answers before submitting."

4. The transition from quote/coverage selection into the full application needs to be clearer.

A few comments suggested uncertainty around whether the quote step was part of the application or what action to take after selecting coverage.

Not an issue (AMA skips landing page).

Review

- Additional tests to run with physicians (for future enhancements)

Estimated Cost¹

\$0

¹Quoted cost is the best rate available based on the information you provided. Final cost may be based upon factors such as gender, health status, and use of tobacco/alcohol. For Hospital Income Insurance, cost shown may vary if dependent coverage is already in effect, please refer to the coverage brochure for complete rate details. Rates current as of 2026.

Premier Accident: Premium credits are reviewed and may change annually. If you elect to pay by monthly EFT, you will receive an additional 5% premium credit. The premium credit is locked in when coverage is issued and is guaranteed for at least the first year of coverage.

Monthly rate URL parameter

ama.nylinSure.com/?mrate

- URL parameter to run A/B testing showing monthly rate on coverage page; if included, all coverages on coverage page will show monthly rate
- AMA potential timeframe for testing end of July

URL parameter issue

- AMA seeing Wordpress issue again
